

PANORAMA

Manufacturing Excellence & Building Relationships Since 1988

About Federal Elevator

We have been manufacturing high-quality residential and commercial elevators since our inception in 1988. Our key to success is offering solid products at competitive rates. We quality control test each unit before shipping to ensure that they will provide our customers with long-lasting performance. Our experienced engineering team has refined the designs of several specialty models and our skilled manufacturing group is dedicated to developing quality elevators and parts. We have a large network of respected Dealers that proudly promote and install our products for their customers throughout the Americas.

Panorama at a Glance

- Capacity of 1000 lbs.
- Travels at a speed of up to 40 feet per minute in both directions.
- Requires a small area to house electrical disconnects, controller and pump unit. Preferable to locate in the lowest landing of the home, adjacent to the unit (can be made remote).
- Can be completely customizable to suit the surrounding décor.
- Interlock devices are installed on every landing to ensure that the door will not open if elevator is not at that floor. This is only one of the numerous safety features included.

Our Showroom

Visit us to try before you buy. Our Showroom, located in Mississauga, Ontario, features functioning elevators and displays of finishing and accessory options. Contact us to make an appointment.
